Requesting Entity Education In Progress

Education In Progress is a non-profit organization that operates in the areas of social commitment, European project-designing, training of staff of The Adult Schools and Adult Migrants' centers in the South of Italy, providing innovative methods to include students in the society and Labor Market. Education In Progress members invest their intellectual and creative force in their own territory previously that comprehend mostly the Italian regions of the South Italy, from Campania and Puglia until Sicily, and at same time they connect throughout Europe. The main goal is to support Adults out of Labor Market or with migrant background by letting them make the first, most difficult step, toward self-improvement and upskilling paths.

Our position in the sector is strong and consistent, as evidenced by the numerous projects we won this year in the adult sector.

"**Outdoor Experiential Learning**" is a project that aims to equip adults with the skills and knowledge to become potential agents of change in their communities, in relation to sustainable practices and environmental protection. Among the skills we believe adults need, migrants in this case, are the skills of logical thinking and reasoning. '**Algorithmic thinking**' is a project that aims to get adults to think like their local partners or supervisors would. With another winning project, "**Key Competences**", we believe it is possible to increase cultural awareness in individuals, civic engagement and social inclusion. According to the project's objective, Education In Progress hardly work on defying new innovative approach for developing the 8 Key Competences and the staff is focused on spreading them among marginalized target groups that are not acquainted with the digital world. Therefore, the staff worked and is working a lot in the development of the DIGITAL COMPETENCE by including in all our projects workshops on ICT, through the use of gamification as a main methodology. We really think that ICT is a fundamental part of the Lifelong Learning and a great support for it, and that is a benefit for growth and employment. For this reason, we specialized in the step that is more difficult: dealing with digital illiteracy and helping people moving the first (off-line steps) in this world.

While with "**Reaching The Stars**" we make pedagogical, offline and online material available to different types of socially disadvantaged adults in order to improve their quality of education and give them more job opportunities. A final project we won, "**Win for Life**", aims to disseminate non-formal teaching methodologies
